64 D3

- 18. (Thrice amended) The method of claim [17] 1 wherein the orally fed antibody is fed [by itself as a] in powder form.
- 27. (amended) The method of claim 8 wherein the [antibodies are] antibody is obtained by fractionating the egg yolk resulting in a protein concentrate [or] of pure [IgY)] chicken immunoglobulin [)].

Claim 31, line 1, cancel "17" and substitute -- 1 --.

Claim 32, line 1, cancel "17" and substitute -- 1 --.

Claim 37, line 1, cancel "36" and substitute -- 39 --.

Add new claims 38 and 39 as follows:

- 38. A method of altering the normal digestive process of a post-suckling mammal to inhibit the absorption of fat, comprising the steps of immunizing a producer animal with pancreatic lipase to produce pancreatic lipase antibody, and then orally administering said antibody to said post-suckling mammal to bind pancreatic lipase in its gastro-intestinal tract and thereby inhibit the fat-hydrolyzing activity of said pancreatic lipase in said tract.
- 39. The method of claim 38 in which said post-suckling mammal is a non-ruminant.
